

LIGHTLINE® RAILING SYSTEM

The modern railing system Designed for Interior and exterior use

Elegant home accents

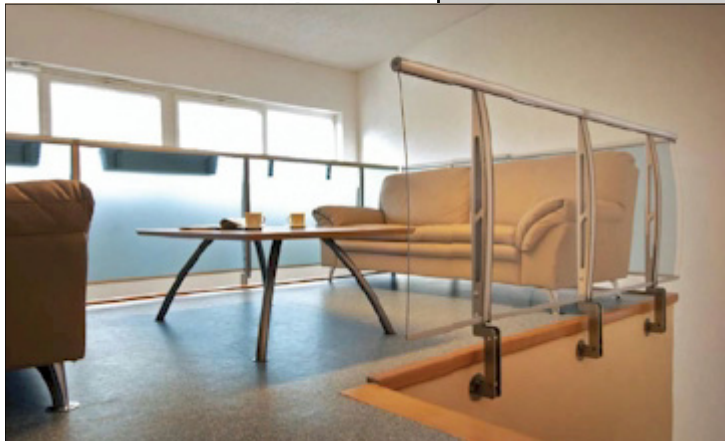

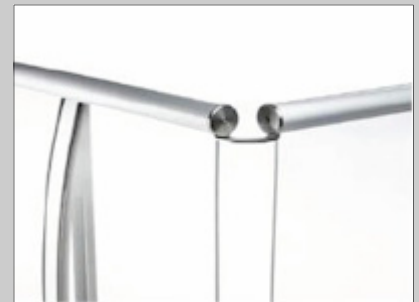

LIGHTLINE® stands for the contemporary combination of wear-resistant aluminium, stainless steel, and high-quality acrylic glass. The youngest member of the LIGHTLINE® product family is the new railing system for internal and external use.

In typical LIGHTLINE® design with the characteristic curved form, the railing system incorporates the exceptional advantages of the LIGHTLINE® door canopy system: Safety, stability and functionality.

Around the corner...

The sophisticated "cornering capability" provides a unique design effect. This allows the end arcs of the acrylic glass pane to be adjusted to the desired angle, thus creating an almost parallel closure. Therefore, even unusual requirements can be executed with style.

...and upwards

Even the transition from a level to an inclined surface can be easily achieved with LIGHTLINE® components.

Aluminium flower boxes

The ideal complement with know-how. The elegant flower box

features eye-catching aluminium design and is resistant to deformation. But its "inner values" can be seen. For example, the box has a special downspout that expels excess liquid but simultaneously retains the necessary moisture to nourish your plants.

French balcony

Those who do not want to do without the radiance of a LIGHTLINE® element for full length windows will certainly find a decorative, safe and reliable solution with the French balcony. The French balcony is stabilized by two heavy duty wall holders that are attached to each post.
